Cracking and Collapsing, Cooke City

Daisy Pass
Cooke City
1/12/2024
Code
Elevation
9600
Aspect Range
W,
Latitude
45.04970
Longitude
-109.96400
Notes

From obs:

"Widespread collapsing and cracking. The collapsing was not especially audible, but the cracks often shot out 50-100' spectacularly- while setting an uptrack, and on descents. The collapsing and cracking was much more pronounced above 9600', and was happening on the new/ old snow interface. This was somewhat surprising in this location, because the old snow surface was Very heavily tracked by snowmobiles prior to this storm cycle." B. Fredlund

"Collapsing, shooting cracks (30ft+), and whumpfing noted while breaking trail on the W aspect of Henderson. Frequency increased with elevation. " Anonymous
