

Alex Lowe basin

Date

Mon, 01/23/2023 - 14:20

Activity

Skiing

Dug on a sheltered N aspect at 9,000 feet below Alex Lowe Peak. Performed an ECT with results of ECTN 12 at 30cm deep and ECTP 21 near the ground.

We also observed widespread sluffing of the new, low-density snow throughout the day, as well as increasing wind transport in the afternoon.

Region

Northern Gallatin

Location (from list)

Alex Lowe Peak
