

Blackmore

Date

Wed, 02/15/2023 - 11:15

Activity

Skiing

Saw a sizable avalanche on the north east face of Blackmore, likely broke mid storm and was partly filled in already - estimated 20" deep, 100' wide. Had shooting cracks and collapsing while ascending northeast ridge. Hand pits showed planar results on an 8" harder slab beneath all the blower on top.

Region

Northern Gallatin

Observer Name

Steve Kuznetsov
