## wet snow avalanches near Cooke

COOKE CITY Cooke City 4/10/2023 Code WL-N-R1-D2 Elevation 9500 Aspect Range S-SW-NE Latitude 45.02020 Longitude -109.93800 Notes

There were maybe 6-10 D1.5-D2 wet loose slides scattered around the area that we could see, similar to attached picture of Crown Butte (We could see Miller Mtn. east and north, Scotch Bonnet, Henderson, Crown Butte, Abundance, Wolverine). At lower elevations where the snowpack is shallower, closer to silver gate and the northeast corner of the park, there were some deeper wet loose slides (D2) and a couple small wet slabs (photo). I would estimate most of these happened yesterday (4/10).

Number of slides 10 Number caught 0 Number buried 0 Avalanche Type Wet loose-snow avalanche Trigger Natural trigger R size 1 D size 2 Problem Type Wet Snow Slab Thickness 10.0 inches Vertical Fall 600ft Slab Width 25.00ft Images Wet loose slide on Crown Butte Wet slides south of Silver Gate **Snow Observation Source**
