

Continued instability in Lionhead

Date

Wed, 12/20/2023 - 16:20

Activity

Skiing

Toured into the southern Lionhead today. Yesterday's warm weather made the snowpack more moist, and the upper snowpack was much more cohesive than in days past. Snow was glopping on skis and skins up to around 9k. I got on NE, E, and SE aspects, which were quite reactive, with more wumphs than in the last few days.

Region

Lionhead Range

Location (from list)

LIONHEAD AREA
