Remote Triggered Avalanche at Buck Ridge

Buck Ridge Northern Madison 1/22/2024 Code AMr-R2-D2-O Elevation 9300 Aspect N Latitude 45.17190 Longitude -111.38000 Notes

In First Yellowmule, Dave was crossing a low-angle slope and remotely triggered an avalanche in steep terrain from 750' away. This avalanche was 1-2' deep, 250' wide, and ran 200' to the meadow below. The avalanche failed on a layer of buried <u>surface hoar</u>. At the crown, we dug a <u>snowpit</u> and had ECTP10 results on this layer.

Some avalanches we saw/ triggered were on wind-loaded slopes, and others were not. All steep slopes are suspect.
