

Recent avalanches and wet snow

Date

Sun, 03/17/2024 - 16:30

Activity

Snowmobiling

We rode from Taylor Fork through Cabin Creek on March 17. We saw a few recent [slab](#) avalanches that happened after the last snowfall, and some recent natural wet loose avalanches, and a [cornice](#) fall. Both (all) of these types of slides are possible for someone to [trigger](#) the next 2-3 days.

Melt freeze crust on sunny slopes was 1-1.5" thick with dry snow below. Softened on south-southwest slopes by midday to early afternoon. Shady slopes seemed to be staying dry up high. Skies were mostly clear with calm wind.

Region

Southern Madison

Location (from list)

Cabin Creek

Observer Name

Alex Marienthal
