

Propagation in low elevation bridgers

Date

Tue, 03/19/2024 - 13:00

Activity

Skiing

I was teaching a snow science program at crosscut today and our group got propagation (ECTP21) in our test pit on the facets at the ground, ~80cm down. The snow was 85cm deep at that location. We were on an eastern aspect around 6200' in a treed area. The students (bozeman 6th graders) were very psyched about getting to try what they'd seen on the mtavalanche youtube and seeing unstable results!

Region

Bridger Range

Location (from list)

Brackett Creek
