

We observed a natural avalanche on Saddle Peak on our drive home today. The Bridger Range received 7" of heavy snow equal to 1" of snow water equivalent in the last 24 hours. During the day we saw heavy wind-loading occurring on the high peaks of the range including Saddle. Photo: GNFAC

Advisory Region Bridger Range Longitude -110.94W Latitude 45.79N **Avalanche Details:** <u>Natural Avalanches on Saddle Peak</u> Bridger Range, 2022-03-16
